

ForensiDisk®

Identify and Convict - helping Police 24/7

Every year, thousands of criminals go free because of poor video quality. The solution - **ForensiDisks** and **S2S Scene to Screen®** Image Control.

So Many Benefits

Great PR - Communities appreciate their Police being “proactive” against crime.

Image Control - References for Resolution, Color Fidelity, Skin Tones, Distortion and more in all video and still images.

Effective deterrent - to criminal activity

ForensiDisks - provide invaluable evidence when videos of an event are captured on bystander’s cell phones.

ForensiDisks greatly increase the accuracy of images in monitoring stations, by providing precision references to known standards.

Every security camera needs its own **ForensiDisk** at entrances to stores, restaurants, Government, public and private buildings, also airports, bus and train stations, even private homes.

Use **ForensiDisks** to **JAIL** the guilty and **FREE** the Innocent

For more information on **ForensiDisk** and other **S2S** Scene to Screen tools and technology, please see overleaf.

Welcome to the S2S

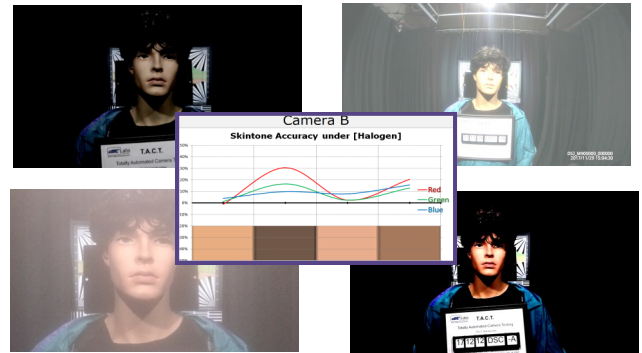

Suite of products

Total Image Control from "Scene to Screen"®

1) Camera Selection with TACT™

TACT (Totally Automated Camera Testing) could save thousands of \$, € and £, because the most expensive camera is often not the best for the job.

Simply send DSC the cameras to be tested and receive back identical videos, of Humanoid Harry skating around. For the analysts, DSC provides graphs comparing resolution, colour, grayscale, skin tones, contrast etc. of the cameras tested, under four different light sources.

Which camera would you choose?

2) Image Acquisition Tools

S2S provides unique tools, technology and maintenance program only available to S2S Members. You will be in good company as DSC Labs provides precision tools, many of them custom, for some of the world's largest corporations, including: ABC, BBC, CBC, CBS, CTV, NBC, NASA, Canon, Sony, Panasonic, and RED camera manufacturers.

To ensure ongoing precision, DSC's S2S image control systems are provided under a signed agreement of confidentiality; some clients refer to DSC as their "Secret Weapon".

ChromaSentry - for Crime Scene Analysis

Use RoliCharts in Police Cruisers

3) Display Selection and Adjustment

You will have patented ScreenAlign® technology to ensure that every computer monitor and display in the Department is reproducing matching, accurate images.

Even with electronic monitor alignment, you can still have non-matching images on multiple monitors. ScreenAlign is different, because it is WYSIWYG (What You See Is What You Get) and uses the most reliable arbiter of image quality, human vision, in addition to state-of-the-art technology.

Use ScreenAlign from Computer Monitors to Projection Displays

4) Printer Selection and Testing

Similarly, use Print-A-Match® to align all professional, office and other printers to produce accurate images for use as evidence in court and photo documentation.

Print-A-Match can also save money in wasted paper and ink/pigment replacement.

Print-A-Match

5) The Cost

S2S Membership typically costs less than an equipped police cruiser and includes: TACT cameras testing and evaluation reports, custom ForensiDisks, use of the patented technology and tools shown plus training and ongoing support for as long as the S2S Membership is maintained with a low annual fee. To maintain precision, TACT and ForensiDisks are exclusive to S2S Members and not available to purchase.

For image precision Don't Shoot, View, Project or Print a frame without S2S !
